Job Description

We are looking for a .NET Core developer responsible for building .NET Core applications, including anything from back-end services to their client-end counterparts. Your primary responsibilities will be to design and develop these applications, and to coordinate with the rest of the team working on different layers of the infrastructure. Therefore, a commitment to collaborative problem solving, sophisticated design, and quality product is essential.

Responsibilities

- Translate application storyboards and use cases into functional applications
- Design, build, and maintain efficient, reusable, and reliable .NET Core code
- Ensure the best possible performance, quality, and responsiveness of applications
- Identify bottlenecks and bugs, and devise solutions to these problems
- Help maintain code quality, organization, and automatization

Skills

- Strong knowledge of .NET web framework
- Proficient in C# with a good knowledge of their ecosystems
- Familiarity with the Mono framework
- Strong understanding of object-oriented programming
- Skill for writing reusable libraries
- Familiar with various design and architectural patterns
- Knowledge of concurrency patterns
- Familiarity with Microsoft SQL Server/MySQL
- Experience with popular web application frameworks
- Familiarity with Windows Presentation Framework
- Knack for writing clean, readable, and easily maintainable code.
- Understanding of fundamental design principles for building a scalable application
- Experience creating database schemas that represent and support business processes
- Basic understanding of Common Language Runtime (CLR), its limitations, weaknesses, and workarounds
- Experience implementing automated testing platforms and unit tests.
- Proficient understanding of code versioning tools such as Git, SVN, team system etc...
- .Net core background service building skills using micro framework.
- AWS/Azure Cloud computing with application integration knowledge

Experience
- 7 years
